

Application: DMPA/2021/1505 at Tudor Lodge, 33 High Street, Repton, Derbys. DE65 6GD

Further Plans to illustrate proposed wall and gate replacement:

Subject to approval it is proposed to replace the decayed section of wall with a concrete post and wooden panel fence; this to be the same as already used for the majority of the rear garden. Each 1.8m close-boarded fence panel will sit on a 29cm deep concrete gravel board, the gravel board and panels being retained by concrete fence posts 8.5cm square.

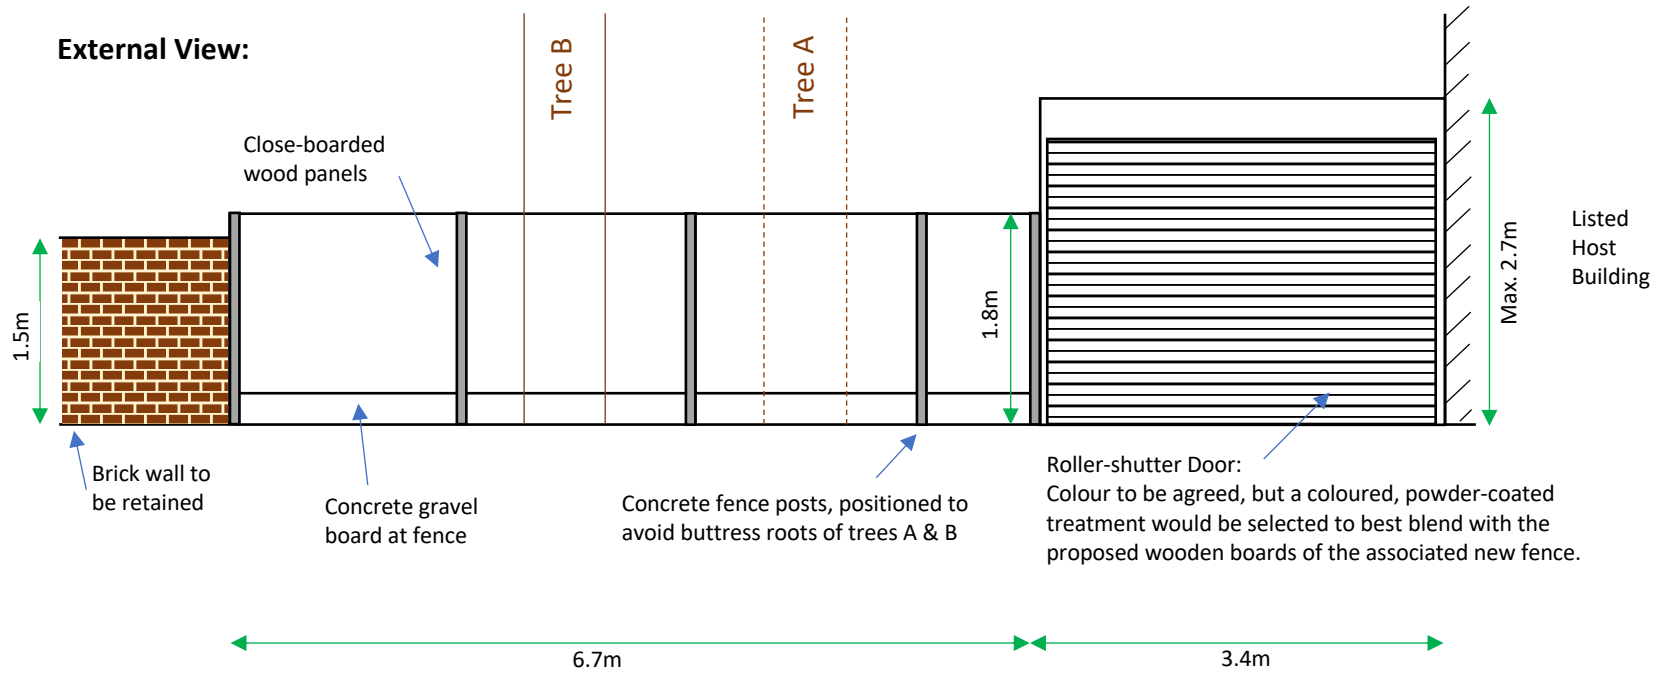

The roller-shutter door, shutter-box and frame will be of coloured, powder-coated metal; the colour treatment being selected to best blend with the associated new fence.

The fence posts will be positioned to avoid the buttress roots of the two trees (A & B) and both the design and materials will be as per those used for much of the rest of the property's perimeter fence.

Photographs of the existing fencing are included below (viewed from the exterior of the boundary):
